ABOUT

I am an energetic, ambitious person who has developed a mature and responsible approach to any task that I undertake, or situation that I am presented with. As a front end developer with a passion for creating beautiful and functional front end websites and applications, I am also cooperative and adaptable to any work environment to achieve a certain objective on time and with a professional attitude.

EXPERIENCE

Generazia d.o.o., Kakanj, BiH — Front End Developer

January 2021 - May 2022

Started working here as I liked to learn more about web development, especially the front-end aspect. My duties were simple but also challenging as I was tasked with creating front-end components which I enjoyed doing on a daily bases. Started and left with a smile on my face to find a more challenging position to progress on this career path.

PROJECTS

Digital Design

Digital Design is a heavily style and animation sided website in which I established critical styling and animating skills. All the code for styles and animations is custom developed by myself in the react framework.

Trillow Real Estate

While not being as heavily style and animation oriented, this project still represented a quite unique set of challenges for me at the time. I was facing problems regarding the API presented to me. To overcome these obstacles, I had to make many assumptions as well as double and triple-checking when it comes to the properties provided by the API data objects.

SKILLS

Html
Css
Javascript
React
Sass
Git

SOFT SKILLS

Critical thinking
Problem-solving
Teamwork and collaboration
Troubleshooting
Observation
Resourcefulness
Self-management
Willingness to learn
Positive attitude
Research and Analysis

LANGUAGES

Bosnian
English
German

Audiophile E-Commerce

Being an e-commerce type website, I had to think strategic so all the parts and components would work together nicely. While not being as difficult as some other projects, this project gave me the opportunity to learn crucial skills regarding any shop or sales related website, from custom components to order confirmation.

Superchat

This project taught me a lot about handling client and back-end interactions. Consisting of two pages, superchat was custom designed and developed by myself to accomplish the main criteria of users being able to interact with each other.

LEARNING ACOMPLISHMENTS SUMMARY

- Cubic bezier transitions
- Dark mode implementation
- Complex element manipulation to achieve a certain look
- Moveable elements based on the user scroll progress
- Mouse interaction events
- Smooth animations
- Handling unreliable data objects
- Making assumptions to prevent bugs and errors
- Providing new, reliable data object filtering the ones from the API
- Handling asynchronous code
- Managing multiple loaders
- Developing search functionality
- Handling routes
- Managing different item categories
- Complete cart functionality
- Form validation with custom messages
- Working with products
- Layout principles
- How to connect to a back-end
- How to handle new and already existing users
- Private routing
- Basic chat functionality
- How to manage back-end data
- Design principles
